Home

Content

- Shows the basic overview insight and vision of this website.

Implementation

- It was a normal static implementation of webpage using html,css and js

*the design is taken from ar shakir's design templates

Image filter

Filters/UX

- User can upload an image or drop it.
- To filter the image just choose the filter and click on it. The design is pretty user friendly.

Implementation

- It was a hard time implementing it as the images had to be passed to a script corresponding to a filter.
- It had been a daunting task coming up with a method or implementing it.

Scripting

Scripts

- The image filter can be as complex and as simple as possible.
- Users can upload an image processing script and they can

Implementation

- It was a great task handling errors and prevent any hacking attempt

Documentation

Documentation

- Describes the libraries that can be used directly so that it doesn't break the code.

Implementation

- UI implementation needed time

Thank you
